With the rising cost of gas prices and no end in sight everyone wants to save as much money at the gas pump as they possibly can.

Do you remember when you could fill your tank for 10 BUCKS or less? Who do the oil companies think they're conning?

You and I can't control the price of gas but by following the current and up-to-date know-how of fuel economy, the tips and tricks, the truth . . . and not the old myths you can quickly and easily start saving significantly on your gas bill.

There is a lot of expert advice available which you can implement instantly so you can start saving money today. Here are some little known tips and tricks you can try out.

1. Paying for your gas the smart way One of the ways that you can save money at the gas pump is by using a gasoline credit card. When you have a gas card you'll be able to get 5 or 10 percent rebate back on the purchase of your gas. This can amount to as much as \$75 to \$300 each year. Many gasoline companies are joining up with other retailers to give you numerous savings at the gas pump.

2. Buy your gas in the morning or evening Gasoline becomes denser in colder temperatures. Gas pumps are set to measure the volume of the fuel that you pump and not the density. This means that if you fill up your gas tank in the cooler morning temperatures, or in the colder evening hours, that you'll be getting better gas price economy. Try to fill up your gas tank later in the evening to avoid the rush of day hours.

The next 2 tips will be surprising to you I'm sure.

3. Buy gas from a busy station Try to buy your gas from a gas station that is consistently busy and therefore has its underground tanks filled on a regular basis. Gas stations that are slow will have gas that has been sitting in underground tanks for longer periods of time, leading to gas contamination. This contamination can mean that the gas you are purchasing is less powerful than fresh gas and will decrease your fuel economy.

4. Turn the nozzle When you have finished filling up your gas tank try turning the nozzle of the hose a full 180 degrees. This will drain a bit more gas into your tank; in some cases up to an entire half cup that would otherwise be a bonus to the next gas customer. That half cup each time adds up to a lot over the year!
