Improve Project Efficiency

Reduce schedule time because we work directly with the General Contractor & Trades

Project Preparation

- Plan review—plan review—plan review
- Shop drawings and layout drawings produced and reviewed
- Pre-construction meetings
- Project flow sequencing and scheduling
- Site and project coordination meetings with all sub-trades
- RFI's prepared and followed up

Pre-Construction Coordination

Builders FirstSource is deeply involved in project preparation beginning with pre-construction meetings with the customer, project flow sequencing and scheduling, and site and project coordination meetings with sub-trades. Our construction consultants will work with architects and engineers to clarify design issues, review shop drawings, and create punch lists to ensure quality control. RFI's are prepared and followed up by our project management team.

Advantages

- Accurate Project Preparation
- Buying Power of Builders FirstSource
- Manufacturing Capabilities for Panels, Trusses & Structural Components
- Material Packages & Labor
- Cost Efficient Planning

One Supplier

Our concept is having one source, which provides you with all the materials and the complete scope of work at a competitive price. Our company's size provides you with the best value because of our buying power and because of our manufacturing capabilities.

All these materials plus labor are handled by the same team. We manage the coordination, distribution, and verification of on-site products and materials, which maintains project flow.

On-Site Project Management

- One Point of Contact
- Less Work for Your Office Staff
- Coordination of All Materials
- Weekly project scheduling, flow review
- All forklifts and cranes with operators are included in our scope of work
- Clean up to owner's dumpsters daily
- Safety meetings and OSHA requirements are in full compliance
- Close coordination and involvement with customer for local inspections
- Coordination with all sub-trades for smooth work flow and scheduling

Installed Framing

Keep projects within budget and on schedule.

Builders FirstSource Installed Framing serves developers, owners, and builders who specialize in large wood frame projects, such as multi-unit residential facilities, hotels and motels, student housing, and other large commercial projects.

Our team of framing experts will come to your jobsite and meet your production schedule. We provide complete framing packages, as well as teams of professionals to frame each project.

Eliminate confusion between suppliers and framers on your project. Key structural components such as roof and floor trusses, wood wall panels, and all other lumber and building materials required for your structure can be accounted for by one supplier.

One team handles your project, so the risk of differing interpretations of your design is greatly reduced. As a result, your design requirements are understood from the beginning, straight through the process.

Receive a single price quote for your entire project from materials and labor procurement, through packing, loading, delivery and installation, and work a single, knowledgeable point of contact who is dedicated to the efficiency and quality of your build. We take ownership no matter what, working to keep your project quality high, your costs low and your hassles down to a minimum. Any problem, we fix it – no misunderstandings with subcontractors and no waiting around.

With materials delivered to the jobsite as needed, there is a reduced risk of minor theft. Our Project Management reduces misuse of materials at the jobsite with ongoing supervision of the framing process, eliminating framing budget cost overruns.

Because your supplies come from one source, we are able to design the most cost-efficient system to meet your performance requirements.

MANUFACTURING FACILITIES

SUMMARY**»» LESS LABOR****»» INCREASED EFFICIENCY****»» REDUCED WASTE****»» QUICKER, EASIER BUILDS****»» FEWER ERRORS, LESS RISK****»» LESS LABOR**

Reduces labor because READY-FRAME[®] packages are precision cut and inkjet labeled before they leave our factory; you don't need a cut man on site and assembly is fast. This means smaller crews that can work on more houses at once — **with less supervision.**

So, you can build more houses in less time.

SEE CASE STUDY »»

**»» QUICKER, EASIER BUILDS**

Gives you more speed, accuracy and control
— **delivered pre-cut, smart-bundled in the order you'll use them.**

»» INCREASED EFFICIENCY

Precision framing packages mean less saw and ladder time
— **reduced clutter = safer jobsite.**

»» FEWER ERRORS, LESS RISK

Helps you frame more houses, faster — **no framing mistakes and no ripple effect through the trades = no lost time and more profit.**

»» REDUCED WASTE = GREENER SOLUTIONS

An organized, safe and clean jobsite = **lower disposal fees.**

NEW ENGLAND DIVISION**MANUFACTURING FACILITIES****» ADDITIONAL PRODUCTS AVAILABLE EXCLUSIVELY IN NEW ENGLAND****» EWP Engineered Floor Systems**

Going beyond engineered floor joists, our engineered floor systems provide a comprehensive structural plan that meets building codes, with precision end trimming, inkjet labeling and precut mechanical holes – saving time and reducing costs.

**» Wall Panels**

Manufactured to your specs with prepared openings delivered ready to install.

- Labeled placement plans
- Pre-assembled and shipped to site
- Quicker build times

**» Roof Trusses & Precut Rafters**

Both standard 2x4 construction and timber trusses delivered ready to install.

- Layouts for complicated roofs
- Rafters, hips, valleys, and curved rafters
- Perfect cuts on CNC machine to 1 millimeter precision

**» Custom Prefabricated**

Precise custom design with 3D CAD software provides a preview of your project.

Porticos, dormers, pergolas, brackets, gazebos, cupolas, and much more can be custom designed and manufactured.
